1. Name*

Chenhao Ma

2. How many students would you like to take?*

2

3. A brief description of the projects the students could work on*

Data Space Connector Development

The data space connector is a key framework component for sovereign, inter-organizational data sharing. It's a Java-based application that can be integrated into various deployment forms. Key components include core services for data and control planes and extensions for technology or cloud-provider-specific functionalities. Some info can be found here: <https://github.com/eclipse-edc/Connector> and <https://github.com/eclipse-edc>

4. Requirements (e.g. html or c++ skills)*

Be proficient with Java, and understand core programming concepts.

Have the ability to work with Git.

Be proficient with HTML, CSS, and JavaScript to build webpages.

5. Other comments or suggestions
